

BAIT MIXTURES FOR ANGLING

TOP-ESSENCE

A top-quality essence, which shows excellent attractiveness.

It consists only of natural products and can be used either in boilies and feeder mixtures or for dipping of baits.

Flavours: Strawberries, Squid, Cranberry, Caviar, Scopex, Shell, Banana, Crab.

Dosage: boilies mixtures 5–10 ml/kg
feeder mixtures 3–5 ml/kg

Package: 50 ml plastic vials

LIQUID AROMA

Concentrates for the aromatisation of bait pastas and mixtures for sport fishing.

It is used to aromatize baits for sport fishing of carps and white fishes.

It is applied directly into the bait mixture.

Flavours: Honey, Vanilla, Tutti-frutti

Dosage: ca 10 ml/kg
or according to your discretion

Package: 50 ml plastic vials

SALMON SPEC-MIX

This is one of the best ingredients of boilies mixtures (10–50%). SALMON SPEC-MIX is a specially processed mix of salmon fish meals and some undisclosed components.

It assures a better release of attractive compounds into the aquatic environment than all classical types of fish meal. It gives outstanding taste and flavour properties to bait mixtures and enhances their digestibility and nutritive value. It functions very well also in cold water.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

RED MIX – HEMP, BIRDSEED

A special mixture of hemp and birdseeds.

Thanks to heat processing the attractive properties of hemp and other seeds are enhanced.

It can be used for making boilies (10–20%) and feeder mixtures (10–50%).

It assures an optimum texture of bait mixture and improves its taste.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

SUPPLEMENTS OF BAIT AND FEEDER MIXTURES FOR FISH

FEED YEAST

A supplement of bait and feeder mixtures for fish.

It is a good source of essential amino acids and enhances the quality of mixtures for fish.

Package: 25 kg paper sacks with a PE insert

FISH MEAL

It is suitable as a supplement of bait and feeder mixtures for fish.

This fish meal can be used for feeding animals and manufacturing of animal feed mixtures. It contains fish products as well as sea food and it is prohibited to give it to ruminants.

Package: 2 kg plastic buckets or 50 kg paper sacks with a PE insert

TROUT

A complete extruded feed for trouts and other salmonids.

This feed is dosed in dependence on the mass and size of fish and with regard to water temperature. It consists of fish meal, cereals, oil plants, oils, fats, and premix of mineral and supplementary substances.

Package: 15 kg paper sacks with A PE insert

FISH-FEED

A complete extruded feed for ornamental and other fish species kept in garden water ponds etc.

Composition: fish meal, cereals, oil plants, oils, fats, and premix of mineral and supplementary substances. It is dosed in dependence on the weight and size of fish and with regard to water temperature.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

EXTRACTED SOYBEAN AND RAPE MEAL, MAIZE GROUTS, GROUND WHEAT AND GROUND BARLEY, HEMP SEED

Package: 1 kg polyethylene sacks or 25 kg paper sacks with a PE insert

Bait, feeder and boilies mixtures

Carp and tench

Bream and white fish

Amur

Predatory fishes

Pelleted baits

for carps

for trouts and other salmonid fish

Preparations for making bait mixtures

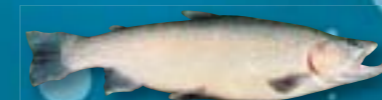

An aromatized protein mixture

An universal concentrates for cyprinids and white fish

TOP Essence

Supplements of bait and feeder mixtures

The company **MIKROP ČEBÍN a. s.** offers you a series of **proved bait, feeder and boilies mixtures, protein pellets, liquid essences and bait supplements**

These mixtures are manufactured from quality protein raw materials supplemented with special aromatic substances and flavour enhancers that should attract the fish. Their composition corresponds with current trends in angling and fish farming.

BAIT MIXTURES FOR ANGLING

BAIT MIXTURES FOR CARPS AND TENCHES

Baits for carp anglers.

These baits are used either as a sole mixture or as a flavour enhancer of groats. The required consistence can be obtained by adding water and breadcrumbs. (It is also possible to add a protein mixture in the ratio 1 : 1 to 1 : 3).

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

BAIT MIXTURE FOR BREAMS AND WHITE FISHES

Baits for sport anglers.

It can be used for making surface and floating baits either as a sole mixture or as a flavour enhancer of groats. The required consistence can be obtained by adding water and breadcrumbs. (It is also possible to add a protein mixture in the ratio 1 : 1 to 1 : 3).

Package: 1kg polyethylene sacks (carton: 10 × 1 kg)

BAIT MIXTURE FOR PREDATORY FISHES

Baits for sport anglers.

It contains special aromatic substances and flavour enhancers that should attract the predatory fishes (perch, zander, catfish etc.) It can be used for making surface and floating baits either as a sole mixture or as a flavour enhancer of groats.

The required consistence can be obtained by adding water and breadcrumbs. **Package:** 1 kg polyethylene sacks (carton: 10 × 1 kg)

BAIT MIXTURE FOR AMURS

Baits for sport anglers.

It is suitable for making both sole baits and feeder mixtures. Its composition corresponds with current trends in sport angling and contains raw materials of top quality. The required consistence can be obtained by adding water.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

BAIT PELLETS FOR TROUTS AND OTHER SALMONIDS

Baits for sport anglers.

These pellets contain essential plant oils as well as some other special aromatic substances and flavour enhancers that should attract trouts and other salmonids (brook trout, rainbow trout, lake trout, grayling, salmon, huchen etc.) It can be used

for making surface and floating baits either as a sole mixture or as a flavour enhancer of other baits.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

CARNIVOROUS FISH Extruded bait material for predatory fish

Bait for sport anglers.

It contains special aromatic substances and flavour enhancers that should attract predatory fishes (perch, pike, zander, asp, catfish etc.) It can be used for making surface and floating baits either as a sole mixture or as a flavour enhancer of groats,

breadcrumbs and other feeds. The required consistence can be obtained by adding water.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

COLOR EXTRUDA MIX

Baits for sport anglers.

They contain special aromatic substances and flavour enhancers that should attract fish (carp, tench etc.). They can be used for making surface and floating baits either as a sole mixture or as a flavour enhancer of groats, breadcrumbs and

other feeds. They show a rapid efficiency. Their composition assures a high nutritive value and excellent attractive effects. These baits are also suitable for a long-term use. The required consistence can be obtained by adding water. **Flavours:** Strawberries, Scopex.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)

PROTEIN PELLETS FOR CARP FISHING

Baits for sport anglers.

These protein pellets can be used as baits and/or decoys all year round. They show a very quick efficiency. Thanks to their composition they show a high nutritional value and an excellent attractive effect. These baits are also suitable for a long-term use. They can be used also as

a bait when fishing with boilies. These pellets are used as surface and floating baits as well as for making bait mixtures and/or flavour enhancers of groats. **Flavours:** Strawberries, Honey, Squid, Scopex.

Pellet diameter: 10 mm.

Package: 5 kg plastic bucket

BOILIE MIXTURES

MAGIC SEEDS

This mixture shows a high efficiency throughout the whole year, i. e. also during the winter. It works **immediately** and **gives excellent results especially in the long-term fishing**. Thanks to its properties, it **gives excellent results also in waters with very low fish numbers!** This mixture is based on a boiled mix of seeds (hemp, yellow millet, rape, flax). Thanks to this **treatment its digestibility and taste were improved**. Very important is also a **coarse texture** of these boilies and a release of attractants into the aquatic environment. The use of milk and plant proteins (casein, **calcium caseinate**) is another important feature of this mixture. Its attractiveness results from the involvement of very tasty and **highly digestible vitamins and minerals**. It is also possible to use various essences and/or their combinations.

TOP-FISH

This is a year-round efficient mixture for making boilies. It consists of top-quality components and shows a very quick and **long-lasting efficiency**. Its high quality is manifested especially in the so-called **difficult waters**, where it gives excellent results. As compared with other mixtures, this mixture gives outstanding results also without the use of essences. It is based on sorted fish meals (salmon, shrimp), sea algae, micropellets, casein, **calcium caseinate**, defatted soybeans meals, boiled mix of seeds, and highly digestible vitamins and minerals. Shares of these components are balanced in an **optimum manner!!!** A **high digestibility and good taste** of this mixture results from the special processing of some components. A **coarser texture** of these boilies enables an **easy release of attractants** into the aquatic environment. It is possible to use various essences and/or their combinations.

MILKY MIX

An **immediate efficiency** without a need of a long-term feeding is the main advantage of this mixture. Milk proteins, which **assure a long-term efficiency**, are the major attractant of this mixture. It is **easily digestible** and **has an excellent taste**. The mixture was developed on the base of a long-term testing. In combination with sweet essences, it gives outstanding results in all types of waters.

Instructions for preparation of a boilies mixture: Add liquid ingredients into mixed eggs and stir. There after add the mixture to reach a mushy consistence. Let to stay for 5–15 min. Then add so much mixture that the pasta is smooth!!! Prior to preparation of this pasta lubricate your hands with a plant and/or fish oil. The optimum ratio is 4–5 eggs and 0.5 kg of this mixture. Use a roball when kneading this pasta.

Package of boilies mixtures: 2 kg plastic bucket

FEEDER MIXTURE SPECIAL

Baits for sport anglers.

This is a year-round efficient mixture that can be used both in feeders and as sole bait. It consists of top-quality ingredients that assure its attractive texture on the one hand and an excellent digestibility of proteins, carbohydrates and energy on the other. It contains both untreated and boiled hemp seeds so that it is very attractive for predatory fishes. It does not absorb bad smells of the muddy bottom. It contains special aromatic substances and flavour enhancers. Its quality will surely satisfy the requirements of the most demanding anglers.

Flavours: Strawberries-Hemp, Scopex-Hemp. **Package:** 2 kg polyethylene sacks (carton: 5 × 2 kg)

PREPARATIONS FOR MAKING BAIT MIXTURES

AROMATIZED PROTEIN MIXTURE

This mixture is suitable as a basic feed for all carpids.

It can be used for dough preparation either alone or in combination with other ingredients. **Instructions for use:** Add enough water to this mixture and stir well. To increase its efficiency, you can add another pulverized or liquid aroma and, possibly, also some solid particles (maize, peas, broken pasta etc.). Offer this mixture either in feeders or freely.

Package: 3 kg polyethylene sacks (carton: 3 × 3 kg)

AN UNIVERSAL CONCENTRATE FOR CARPIDS AND WHITE FISH

It is used when making baits for sport fishing.

The content of concentrated aromatic substances and flavour enhancers help to mask possible occurrence of some unpalatable and/or disgusting ingredients used for the production of a bait mixture. This concentrate is made of quality protein raw materials supplemented with special aromatic substances and flavour enhancers that were developed to attract fish. It is added as the last ingredient into all bait mixtures.

Mix in water (1 : 10) and thoroughly stir. The required consistence can be obtained by adding water.

Package: 1 kg polyethylene sacks (carton: 10 × 1 kg)
